# Planning and Scheduling

## in Manufacturing and Services

**(Second Edition)**

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

**Michael Pinedo**

**PART I: PRELIMINARIES**

**Chapter 1. Introduction.**
1.1. Planning and Scheduling: Role and Impact
1.2. Planning and Scheduling Functions in an Enterprise
1.3. Outline of the Book.

**Chapter 2. Manufacturing Models**
2.1. Introduction
2.2. Jobs, Machines, and Facilities
2.3. Processing Characteristics and Constraints
2.4. Performance Measures and Objectives
2.5. Discussion

**Chapter 3. Service Models**
3.1. Introduction
3.2. Activities and Resources in Service Settings
3.3. Operational Characteristics and Constraints
3.4. Performance Measures and Objectives
3.5. Discussion

## PART II: PLANNING AND SCHEDULING IN MANUFACTURING

**Chapter 4. Project Planning and Scheduling**

4.1. Introduction
4.2. Critical Path Method (CPM)
4.3. Program Evaluation and Review Technique (PERT)
4.4. Time/Cost Trade-Offs with Linear Costs
4.5. Time/Cost Trade-Offs with Nonlinear Costs
4.6. Project Scheduling with Workforce Constraints
4.7. ROMAN: a Project Scheduling System for the Nuclear Power Industry
4.8. Discussion

**Chapter 5. Machine Scheduling and Job Shop Scheduling**

5.1. Introduction.
5.2. Single Machine and Parallel Machine Models
5.3. Job Shops and Mathematical Programming
5.4. Job Shops and the Shifting Bottleneck Heuristic
5.5. Job Shops and Constraint Programming
5.6. LEKIN: A Generic Job Shop Scheduling System
5.7. Discussion

**Chapter 6. Scheduling of Flexible Assembly Systems.**

6.1. Introduction
6.2. Sequencing of Unpaced Assembly Systems
6.3. Sequencing of Paced Assembly Systems
6.4. Scheduling of Flexible Flow Systems with Bypass
6.5. Mixed Model Assembly Sequencing at Toyota
6.6. Discussion

**Chapter 7. Economic Lot Scheduling**

7.1. Introduction
7.2. The Single Product Model
7.3. Multiple Products and Rotation Schedules
7.4. Multiple Products and Arbitrary Schedules
7.5. More General Models
7.6. Multiproduct Planning and Scheduling at Owens-Corning Fiberglas
7.7. Discussion

**Chapter 8. Planning and Scheduling in Supply Chains**

8.1. Introduction
8.2. Supply Chain Settings and Configurations
8.3. Frameworks for Planning and Scheduling in Supply Chains
8.4. A Medium Term Planning Model for a Supply Chain
8.5. A Short Term Scheduling Model for a Supply Chain
8.6. Carlsberg-Denmark: An Example of a System Implementation
8.7. Discussion

## PART III: PLANNING AND SCHEDULING IN SERVICES

**Chapter 9. Interval Scheduling, Reservations, and Timetabling**
- 9.1. Introduction
- 9.2. Reservations without Slack
- 9.3. Reservations with Slack
- 9.4. Timetabling with Workforce Constraints
- 9.5. Timetabling with Operator or Tooling Constraints
- 9.6. Assigning Classes to Rooms at U.C. Berkeley
- 9.7. Discussion

**Chapter 10. Planning and Scheduling in Sports and Entertainment**
- 10.1. Introduction
- 10.2. Scheduling and Timetabling in Sport Tournaments
- 10.3. Tournament Scheduling and Constraint Programming
- 10.4. Tournament Scheduling and Local Search
- 10.5. Scheduling Network Television Programs
- 10.6. Scheduling a College Basketball Conference
- 10.7. Discussion

**Chapter 11. Planning, Scheduling, and Timetabling in Transportation**
- 11.1. Introduction
- 11.2. Tanker Scheduling
- 11.3. Aircraft Routing and Scheduling
- 11.4. Train Timetabling
- 11.5. Jeppesen Systems: Designs and Implementations
- 11.6. Discussion

**Chapter 12. Planning and Scheduling in Health Care**
- 12.1. Introduction
- 12.2. Scheduling a Single Operating Room
- 12.3. Multiple Operating Rooms - A Set Packing Formulation
- 12.4. Multiple Operating Rooms - A Stochastic Approach
- 12.5. Planning and Scheduling Radiotherapy Treatments
- 12.6. Emergency Room Scheduling - A Constraint Programming Approach
- 12.7. A Surgery Scheduling and Bed Occupancy Levelling System
- 12.8. Discussion

**Chapter 13. Workforce Scheduling**
- 13.1. Introduction
- 13.2. Days-Off Scheduling
- 13.3. Shift Scheduling
- 13.4. The Cyclic Staffing Problem
- 13.5. Extensions and Applications of Cyclic Staffing
- 13.6. Crew Scheduling
- 13.7. Operator Scheduling in a Call Center
- 13.8. Discussion

## PART IV: SYSTEMS DEVELOPMENT AND IMPLEMENTATION

**Chapter 14: Systems Design and Implementation**

14.1. Introduction
14.2. Systems Architecture
14.3. Databases, Object Bases, and Knowledge Bases.
14.4. Modules for Generating Plans and Schedules.
14.5. User Interfaces and Interactive Optimization.
14.6. Generic Systems vs. Application-Specific Systems
14.7. Implementation and Maintenance Issues

**Chapter 15. Advanced Concepts in System Design**

15.1. Introduction
15.2. Robustness and Reactive Decision Making
15.3. Machine Learning Mechanisms
15.4. Design of Planning and Scheduling Engines and Algorithm Libraries
15.5. Reconfigurable Systems
15.6. Web-Based Planning and Scheduling Systems
15.7. Discussion.

**Chapter 16. What Lies Ahead?**

16.1. Introduction
16.2. Planning and Scheduling in Manufacturing
16.3. Planning and Scheduling in Services
16.4. Solution Methods
16.5. Systems Development
16.6. Discussion

## APPENDIXES

**Appendix A: Mathematical Programming Formulations**
- A.1. Introduction
- A.2. Linear Programming Formulations
- A.3. Nonlinear Programming Formulations
- A.4. Integer Programming Formulations
- A.5. Set Partitioning, Set Packing, and Set Covering
- A.6. Disjunctive Programming Formulations

**Appendix B: Exact Optimization Methods**
- B.1. Introduction
- B.2. Dynamic Programming
- B.3. Optimization Methods for Integer Programs
- B.4. Examples of Branch-and-Bound Applications

**Appendix C: Heuristic Methods**
- C.1. Introduction
- C.2. Basic Dispatching Rules
- C.3. Composite Dispatching Rules
- C.4. Beam Search
- C.5. Local Search: Simulated Annealing and Tabu-Search
- C.6. Local Search: Genetic Algorithms
- C.7. Discussion

**Appendix D: Constraint Programming Methods**
- D.1. Introduction
- D.2. Constraint Satisfaction
- D.3. Constraint Programming
- D.4. OPL: An Example of a Constraint Programming Language
- D.5. Constraint Programming vs. Mathematical Programming

**Appendix E: Selected Scheduling Systems**
- E.1. Introduction
- E.2. Generic Systems
- E.3. Application-Specific Systems
- E.4. Academic Prototypes

**Appendix F: The LEKIN System User's Guide**
- F.1. Introduction
- F.2. Linking of External Programs

**Notation**

**References**

**Name Index**

**Subject Index**

## CD-ROM

## TABLE OF CONTENTS

**0. CD Overview**

**1. Slides from Academia**
- (a) Twente University (by Erwin Hans and Johann Hurink)
- (b) Iowa State University (by Siggi Olafsson)
- (c) University of Nottingham (by Sanja Petrovic)
- (d) Carnegie-Mellon University (by Sibel Salman)
- (e) University of Amsterdam (by Eric van der Sluis and Cees Duin)

**2. Slides from Corporations**
- (a) Alcan
- (b) Jeppesen (Carmen) Systems
- (c) Cybertec
- (d) Dash Optimization
- (e) Multimodal
- (f) SAP

**3. Scheduling Systems**
- (a) LEKIN Job Shop Scheduling System

**4. Optimization Software**
- (a) Dash Optimization Software (with Sample Programs for Examples 8.4.1, 11.2.1, 11.3.1)
- (b) ILOG OPL Software (with Sample Programs for Examples 8.4.1 and 11.2.1)

**5. Examples and Exercises**
- (a) Tanker Scheduling (Computational details of Example 11.2.1)
- (b) Aircraft Routing and Scheduling (Computational details of Example 11.3.1)

**6. Mini-cases**
- (a) ILOG
- (b) Dash Optimization

**7. Additional Readings (White Papers)**
- (a) Jeppesen (Carmen) Systems
- (b) Multimodal Inc.

**8. Movies**
- (a) Saiga - Scheduling at the Paris airports (ILOG)
- (b) Scheduling at United Airlines
